

Game Changer for Digital Signage Connectivity

Monitors AnyWhere Connect is a combined hardware and software solution that can control digital signage with different content channels, anywhere in your establishment, from a single PC.

How does it work?

Monitors AnyWhere Connect uses HDMI over LAN technology, with a zero client unit installed next to each screen. One PC pushes the content over the existing LAN to the zero clients, that feed it to the screens. The display may feature cloning of the same content, different content on different screens or a video wall.

Main Features:

- Run a different PowerPoint presentation, web based content, video, image, spreadsheet and others on each screen
- Schedule a playlist for each screen
- Create a video wall or clone a display on a group of screens

Utilize it to push any content

Web pages
in full screen

PowerPoint
presentations

Network Video Wall

The **Monitors AnyWhere video wall** solution uses HDMI over LAN zero clients that connect to a controlling PC over the existing LAN. One PC can control multiple video walls.

Network Video Wall Solution Architecture

Why Monitors AnyWhere's Network Video Wall:

- Manage multiple high definition video walls with a standard PC
- No need to install any additional video cards on the host PC
- No need for splitters, cable extenders or other cumbersome infrastructures
- Enjoy the freedom of placing the central PC anywhere within the local area network
- Easily create eye catching video walls that run videos, images, HTML5 content and more

Online Monitors AnyWhere

Online Monitors AnyWhere is a hosted, cloud-based Content Management System that displays pre-designed layouts on hundreds and thousands of remote screens. The simple design of the layouts and the control of the displays can be done from any device with Internet access. Built-in apps allow adding YouTube, Twitter, Facebook, Instagram, Weather, RSS feeds and other interactive apps to create eye-catching content on your screens.

Why Online Monitors AnyWhere:

- Control thousands of remote displays in your organisation from any device with internet access
- Easily design beautiful and attractive layouts
- Add information from advanced apps like YouTube, Twitter, Facebook, Instagram, Yammer
- Schedule what will be shown, and when
- Easy to use and very affordable

USB Wall

Our latest product is the revolutionary USB wall - a simple and inexpensive way of creating and controlling a high-quality video wall. Using our innovative software, coupled with USB to HDMI adapters, we offer this very affordable and easy to build video wall solution.

USB Wall Solution Connections Diagram

Advantages:

- Create a video wall in just a few minutes
- Save money by utilizing USB Adapters instead of expensive video cards or multi-monitor graphic boxes
- Create a stretched desktop with a resolution of up to 8K
- Display an application on each monitor or span one application across multiple screens
- Use your laptop to push content onto a large array of screens
- Includes bezel compensation
